Source Naturals® and Planetary® Herbals
Quality Statement

Quality First
At Source Naturals® and Planetary® Herbals, we honor the trust our customers place in us with an unwavering commitment to the highest standards of quality. Our customers’ well-being is our utmost priority. The guiding principle for everything we do is to provide safe, superior quality products that enhance customers’ health and well-being.

Our Quality Standards

Raw Materials
Our commitment to quality begins with sourcing botanical powders and extracts and other raw materials, including organic and non-GMO verified ingredients when available. Unlike many other brands, we do our own manufacturing and have complete control over all aspects of raw material procurement, formulation, and quality testing. Multiple tests are performed on every ingredient to ensure identity, purity, and potency. Our in-house quality control team and laboratory uses the most appropriate classical and modern analytical assessment techniques. These include botany, morphology, microscopy, high performance thin-layer chromatography (HPTLC), high performance liquid chromatography (HPLC), liquid chromatography with mass spectrometry (LC-MS), state of the art inductively coupled plasma mass spectrometry (ICP-MS) for heavy metal testing, spectrophotometric methods (UV-Vis, FTIR), testing for microbial contamination, and other scientifically valid methods.

Manufacturing
Once the purity and authenticity of each raw material is verified, we manufacture our products in accordance with regulations for Good Manufacturing Practices (GMP) established by the FDA. Our facilities are registered as GMP compliant by NSF International and are audited by this third-party certifying organization twice a year, in addition to routine FDA inspections.

Finished Products
Just as every incoming raw material is tested, before finished products are packaged, we test every batch to ensure customers are getting what the label says. This is our commitment to you.
